Irganox® 1076 FD (ED)

AO for solvent-based and powder-coating applications

Application:

Irganox 1076 FD (ED) is a highly effective, primary phenolic antioxidant for organic substrates such as coatings, plastics, elastomers, adhesives, & waxes. It protects these substrates against thermo-oxidative degradation.

Performance Highlights:

- Can be used in combination with other additives such as co-stabilizers, light stabilizers and other functional stabilizers (e.g. HALS)
- Non-discoloring
- High resistance to extraction, low volatility, and good compatibility
- Odorless

Characteristic Values:

	Irganox 1076 FD (ED)
Appearance:	White pastilles
Density [g/cm^3]:	1.02
Melting Point:	50-55 °C
Bulk Density [g/l]:	480 – 590
Flashpoint:	273 °C
