Efka® PU 4050

High molecular weight, polyurethane dispersing agent for high-quality industrial and automotive coatings

Application:

Efka® PU 4050 is a polymeric dispersant for stabilizing inorganic and organic pigments. It is used for all kinds of solvent-based coatings, including automotive topcoats (OEM and refinish) and high-quality industrial coatings such as coil coatings and 2-pack polyurethane coating systems. **Efka® PU 4050** can also be used in pigment concentrates for such high-end applications requiring durability.

Performance Highlights:

- High color development
- Improves gloss and DOI
- Reduces flooding problems

Characteristic Values:

	Efka® PU 4050
Appearance:	Clear, slightly yellowish liquid
Color Gardner:	≤ 10
Active ingredients [%]:	~ 45
Density at 20°C [g/cm3]:	~ 1.00
Amine value [mg KOH/g]:	~ 12
Solvent:	n-butyl acetate/methoxypropyl acetate
Flash point:	24 °C (75° F)
